

A' B3
Cont
such that the actuator may be rotated in said first direction to said selected position to provide a selected intensity of light and may be rotated in said second direction to momentarily provide said selected intensity of light.

REMARKS

The specification has been retyped with greater spacing between the lines to conform to standard practice. No changes have been made except the typographical corrections indicated above.

The Abstract has been amended to correct typographical errors and to remove the term "means".

The informal drawings originally submitted are being replaced herein with formal drawings and a numerical error is corrected in FIG. 13.

Claim 1 is cancelled herein without prejudice or disclaimer. New claims 2-45 are inserted herein to more fully protect the novelty of the applicant's invention.
